

# Pi4 Automation

## Intelligent Management and Advanced Automation

**Comprehensive software** to coordinate production, storage, and automated equipment.

**Pi4** is a platform designed to manage not only the flow of goods but also the operation of **cutting-edge automated equipment**. It controls and synchronizes processes in warehouses, packaging centers, and production lines, integrating with various industrial technologies.

Beyond storage management, Pi4 functions as the **central intelligence system** that coordinates:

- Smart warehouses with stacker cranes
- Automated packaging and robotic picking lines
- Freezing tunnels with motion and timing control
- Integration with conveyors, shuttles, and AS/RS systems
- Mixed robotic–operator operations
- Real-time analysis and optimization

## Proven integration

Twins Informática has implementations with multiple automation providers, where Pi4 acts as the software that directs, monitors, and optimizes the behavior of connected equipment.
