

# Pi4 Cloud

**Comprehensive software to manage production, inventory, and traceability**

**Pi4 Cloud** is a solution designed to centralize and control all information generated in a production plant, applying industry-leading practices.

**It supports the entire production process:**

- from the reception of raw materials, livestock, and supplies,
- including intermediate stages,
- up to the final product and its dispatch.

**Intelligent control at every stage**

- Full traceability through unique barcodes
- Automatic validation to allow or block production entries
- Immediate issuance of the final product delivery note
- Integrated quality control for raw materials, supplies, semi-finished and finished products.

## Real-time queries and reports

The system includes a multi-company web portal that allows agile and reliable reports directly online.

Each query can be adapted to the needs of each area, consolidating information from different plants and stages.

## Cloud version

This system version is designed for micro-SMBs, as it includes all features of the standard Pi4 version while being offered in cloud mode: **no software purchase or local installation required.**

Users access the system through credentials provided by Twins, working directly in the cloud, reducing initial investment and avoiding complex installation processes.

Lower investment in equipment  
(servers, software licenses)

High service availability

Low maintenance

Share information with off-site  
stakeholders

Information integration between  
plants (RM – FG)
