

## Comprehensive software to manage production, inventory, and traceability

**Pi4** is a solution designed to centralize and control all information generated in a production plant, following industry-leading practices.

### It supports the entire production process:

- from the reception of raw materials, livestock, and supplies,
- including all intermediate stages,
- up to the final product and dispatch.

### Intelligent control at every stage

- Full traceability through unique barcodes
- Automatic validation to allow or block production entries
- Immediate issuance of distribution delivery notes
- Integrated quality control for raw materials, supplies, semi-finished and finished products.

## Real-time queries and reports

The system includes a multi-company web portal that allows agile and reliable reports directly online.

Each query can be adapted to the needs of each area, consolidating information from different plants and stages.

## Main functionalities of Pi4
